Mounting Lunaqua 10 lights

We sometimes get asked the best way to mount lunaqua 10 lights in a pool. The answer is screw them to the base, but if you have a pool liner this is not a good idea. So we suggest mounting them on a non ferrous pipe and secure the lights with with cable ties.

The pipe can then be held down by a large weight at either end. If you are using lunaqua 10 lights with 75 watt lamps the lights must be totally submerged (if using 50 or 35 watt lamps you do not need to secure them, but a word of caution, if you do not secure them they will float *)

The back of 4 lunaqua 10 lights

The same lunaqua 10 lights with coloured filters fitted

You could also mount them on a paving slab

* Although these lights will float if not anchored, they are not floating lights, since the cable will soon become damaged
